## Frequently Asked Question & Answers on GI Pipes & MS Pipes..

**Question:**

**Answer:-**

**What is Carbon Steel Pipe**

Carbon steel piping is a durable material made from carbon steel, a steel alloy with iron and carbon. Because of its strength and ability to withstand stress, carbon steel pipe is used in a variety of heavy-duty industries like infrastructure, ships, distillers, and chemical fertilizer equipment. Totten Tubes offers a range of carbon steel pipe to meet your application needs, including hard-to-find and custom sizes.

**Question:**

**Answer:-**

**What are the types of carbon steel pipes?**

Different types of Carbon Steel Pipes / Carbon Steel ERW Pipes. / Carbon Steel Welded Pipes. / Carbon Steel Fabricated Pipes. / Carbon Steel ASTM A335 Pipes. / Carbon Steel Seamless Pipes. / Carbon Steel LSAW Pipes.

**Question:**

**Answer:-**

**What is the difference between galvanized steel and carbon steel?**

Galvanizing is a way to protect carbon steel without completely changing its structure. When carbon steel is galvanized, a layer of zinc is spread over its surface. Zinc is much lower on the galvanic scale than carbon steel, which means it's more basic and more likely to give up its electrons than carbon steel.

**Question:**

**Answer:-**

**Does carbon steel get rust?**

All carbon steels are susceptible to rust, making them unfit for use in a wide variety of end-use applications. Overall, carbon steel is excellent if you're looking for a low-cost metal, but generally unfit for high-quality or high-precision manufacturing operations.

**Question:**

**Answer:-**

**Is carbon steel cheaper than stainless steel?**

Though susceptible to rust unlike stainless steel, carbon steel is often cheaper and has its own varying mechanical properties based on carbon content. Low-carbon steels are weaker and softer, but can be machined and welded easily; while high-carbon steel is stronger, but significantly harder to process

**Question:**

**Answer:-**

**Is carbon steel same as mild steel?**

Mild steel is a type of carbon steel. The element carbon is present in all steel. Whenever this carbon is the main alloying element, the alloy is considered a carbon steel. "Low-carbon" steel is another name for mild steel.

**Question:**

**Answer:-**

**What is the meaning of CS pipe?**

Carbon steel pipe is used as the base pipe of bimetallic combination tubing, which has an internal liner made of stainless steel, titanium alloy steel, copper or aluminum, and so on.

**Question:**

**Answer:-**

**How are carbon steel pipes made?**

They are produced by two distinct methods which result in either a welded or seamless pipe. In both methods, raw steel is first cast into a more workable starting form. It is then made into a pipe by stretching the steel out into a seamless tube or forcing the edges together and sealing them with a weld.

**Question:**

**Answer:-**

**What pipe is used for oil and gas?**

Three types of pipes are used in Oil and Gas industry are Seamless pipes, ERW Pipes, and LSAW Pipes. All these types of Pipes are available in many materials and grades. A seamless pipe is manufactured without making any weld and by forming a hard steel billet on a shrill rod.

**Question:**

**Answer:-**

**Do you Provide Manufacturer's Test Certificate along with Supply of Carbon Steel Pipes,**

Yes All Branded Pipes are supplied along with Manufacturer's Test Certificate (MTC). IBR form III-C , in original / duly attested Photo copy, with relative heat marking will be provided as applicable.
